

## **Fork Positioner for Forklifts**

Fork Positioner for Forklifts - A fork positioner is actually a tool made out of top quality materials designed to endure the most challenging operations and work environments. This particular piece of equipment could enable the one driving to maneuver the forks hydraulically without leaving the seat. Side shifting models have the extra ability to laterally position the arms or the entire load in order to facilitate much more accurate carrying and placement in a quicker and more efficient manner.

The blade pocket is rather unique and could enable the one operating it to be able to safely sway the blades into position without any worry of damaging the positioning cylinders. This allows the operator the alternative to perform simultaneous or independent fork movement, depending on the job requirement. For most forklifts with non-OEM carriages, complete carriages are considered necessary. Standard OEM carriages can be converted into fork positioners on existing units.
